

Primary School Maths - The Basics for Parents

Workshop

0-5yrs

6-12yrs

Summary

Many parents are keen to understand how maths is taught today, as it has changed considerably since they were at school. We often hear how even the language used in schools nowadays, such as 'number bonds', 'partitioning' and 'number lines', makes supporting their child at home challenging. This workshop will give parents a detailed overview of the most important calculation concepts in primary school maths learning today (addition, subtraction, multiplication and division including the times tables).

This workshop will explore what children need to know in order to succeed in maths calculations and the methods used.

Please note - a separate workshop will be offered for more advanced maths concepts (place value, fractions etc) that are usually taught in years 5 and 6.

Who is this event for?

Any parent or carer who would like to learn the core skills that underpin the teaching of maths calculations today. It is ideally suited for parents of children from reception to year 4.

What parents will gain from the event

- An understanding of how maths calculations are taught in primary schools today.
- The meaning of common terms used in the teaching of maths.
- The basics of key concepts in maths: addition, subtraction, multiplication and division including times tables.
- Ways to improve your child's understanding, and increase their enjoyment of maths.
- Confidence in helping your child with maths.
- Resources to take home.
